Marjon C. Vera

FULL-STACK · MOBILE · COMPUTER VISION

marjonvera2005@gmail.com
github.com/marjonvera2005-creator
Naval, Biliran, Philippines

BS Computer Science student at Biliran Province State University who builds systems that watch, verify, and guide: web systems with PHP and MySQL, Flutter mobile apps, and computer-vision models that run on the phone with no internet connection. Open to internships and junior developer roles.

PROJECTS

IntelliGuide

Thesis · in development

Assistive obstacle-detection app for visually impaired users

- Developing the Flutter app and its on-device detection pipeline: real-time obstacle detection with distance and direction, plus voice and vibration guidance.
- Three-stage pipeline: YOLOv8 Nano (19 trained classes), a CNN+ViT verifier for low-confidence results, and YOLO26 Nano for a second opinion. Runs fully offline.

Tingi

Startup · demo v1.0

Plastic-recycling rewards app, launching in Palo, Leyte

- Part of the founding team building the mobile app: residents request plastic pickups, verified kilograms earn points by plastic type, and points are redeemed for eco products.

QuiteScan

Sole developer · 3rd year, 1st sem · live

QR-based IN/OUT attendance system · quitescan.onrender.com
Final project · Application Development and Emerging Technologies

- Built end to end: web interface, PHP back end, MySQL database, and QR generation and scanning.
- Determines IN/OUT automatically from each student's previous movement, and debounces repeated scans so one scan creates one record.

CocoScan

App developer · team of 5 · 2025

Coconut leaf disease scanner · Design and Analysis of Algorithms final project

- Built the Flutter app. The team compared five CNNs and deployed EfficientNetB0 (96.25%, 154 of 160 test leaves) to detect caterpillar damage, yellowing, and flaccidity.

CassavaCare

Faculty project

Cassava leaf disease detection, fully on-device

- Trained both models (a YOLOv8 Nano leaf detector and a hybrid ResNet50 + ViT-B/16 classifier for five conditions) and integrated them into a Flutter app with TensorFlow Lite.
- Converted the model PyTorch → ONNX → TensorFlow → TFLite; identified 34 of 41 test leaves correctly (82.9%) end to end.

Banana Detector

Immersion · Vietnam

Banana ripeness detection with YOLOv8

- Trained a YOLOv8 model that grades each banana as unripe, ripe, overripe, or rotten, and built the app around it, during the immersion program at the University of Danang.

EDUCATION

BS Computer Science

Biliran Province State University

SKILLS

Web & systems

HTML5, CSS3, JavaScript, PHP, MySQL, schema design, REST APIs, auth & sessions

Mobile

Flutter, TensorFlow Lite, on-device inference, offline-first, GPS, OpenStreetMap, Hive

AI & vision

Python, YOLOv8, OpenCV, Google Colab, Kaggle, dataset annotation, model evaluation, PyTorch → ONNX → TFLite

AWARDS

Best Emerging Markets Machine Learning Architect Award (International)

For Academic Excellence, BS Computer Science third year level · Biliran Province State University · May 2026

TRAININGS

- **Immersion Program in IT**, University of Danang, Vietnam · Mar 2026
- **Networking Basics**, Cisco Networking Academy · May 2026
- **AI Literacy and Responsible Use**, CHED ACHIEVE · Mapúa University with Arizona State University · Sep 2026
- **Integrated OS: Be More Digi-TALINO**, Integrated Office Solutions · Sep 2025
